EDUCATION

American University of Beirut (AUB), Beirut, Lebanon

Bachelor of Engineering in Computer and Communications Engineering

GPA: 3.72/4.0

Sep 2022 - Jun 2026

EXPERIENCE

Anzimati, Beirut, Lebanon

Assistant Software Developer

Aug 2023

- Contributed to developing software solutions for managing patient data at a university diagnostic center.
- Assisted in designing a user-friendly interface tailored to the needs of medical staff.
- Supported in presenting and marketing the software to potential clients from social development organizations.

Tutoring, Beirut Lebanon

Tutored an Introduction to Programming course, focusing primarily on foundational programming concepts and algorithms

Jan 2025 - Present

Inmind.Ai, Beirut Lebanon

Back End Training Program

Feb 2025 - Mar 2025

- Completed a practical training program focused on backend development with .NET Core, REST APIs, authentication (Keycloak), background jobs (Hangfire), and containerization using Docker. Also gained exposure to frontend tools with Angular and Node.js.
- Worked with development tools such as GitHub and gained knowledge of Domain-Driven Design (DDD) principles to improve software architecture and maintainability.

CME Offshore, Beirut, Lebanon

Intern, Backend Development

July 2025 - Aug 2025

- Designed and built the full backend for a Lebanese healthcare app connecting patients with physicians, using .NET (C#), PostgreSQL, MVC architecture, and stored procedures (no ORM), ensuring clean, maintainable SQL logic.
- Developed and tested all API endpoints, including user authentication flows (login, register, forgot password with SMTP), and structured the relational database schema from design to deployment.
- Led backend development and testing, and will present the product to a jury, showcasing its real-world impact on simplifying doctor-patient discovery and booking in Lebanon.

PROJECTS

Unicode, Python

Mar - May 2026

- Architected a multi-agent CLI pipeline coordinating Claude, Codex, and Qwen, automating end-to-end software engineering workflows.
- Engineered a fault-tolerant agent fallback chain (Claude → Codex → Qwen) with parallel execution, automatic git integration, and persistent cross-session memory for continuous context across runs.
- Established a CI/CD pipeline with automated linting, ensuring code quality and reliability across the full orchestration system.

Library Management System, Java

Nov 2024

- Built a library management software as part of a course project, applying Object-Oriented Programming (OOP) principles.
- Automated operations such as book borrowing, returns, and catalog updates.

Verdict, Python, PostgreSQL

Apr - May 2026

- Agentic AI contract review platform that turns uploaded PDFs into clause-level risk findings with evidence anchors and mandatory human approval.
- Designed a run-based agentic legal AI pipeline: Harvey retrieves evidence, Kira detects risks, and Admin merges findings into an auditable final review.
- Created an LLMops/fine-tuning workflow for Kira using CUAD/MAUD data, DeepSeek distillation, Gemma 26B QLoRA training, evaluation metrics, and deployment automation.

Cellular network detector, Flask, Kotlin, PostgreSQL

April 2025

- Designed and implemented PostgreSQL database schema to store cellular network metrics and timestamps through natural language processing.
- Structured tables to efficiently log signal strength, SINR/SNR, cell ID, frequency, and network type
- Integrated database with Flask backend for seamless data retrieval and storage

Appointly, .NET C#, PostgreSQL

July - Aug 2025

- Developed Appointly.API backend using .NET 9 and PostgreSQL with 15+ RESTful endpoints for healthcare appointment management and JWT authentication.
- Engineered secure database architecture with PostgreSQL functions and micro ORM, implemented OTP verification with salting.
- Created 80+ xUnit test cases ensuring system reliability while collaborating with a 4-person team to deliver our healthcare solution

Nomada, Python, PostgreSQL

Aug - Dec 2025

- Developed an AI-powered booking agent using LLM APIs with prompt engineering and JSON-based state management to autonomously handle multi-step reservation workflows through natural language processing.
- Built full-stack application with React frontend and Flask RESTful API backend connecting the AI agent to PostgreSQL database for managing users, bookings, and payments.
- Engineered agentic workflows orchestrating payment gateway integration, database operations, and automated backups with Docker containerization.

SKILLS

Soft skills: Leadership, Problem-solving, Interpersonal skills, Teamwork, Attention to detail, Time management.

Technical skills and tools: Python, Java, C#, C++, MS Office Suite, Git, PostgreSQL, Docker, Kubernetes.

Languages: Fluent in English, French, Arabic; currently learning Spanish.
